

	B_1	B_2	B_3
A_1	L		
A_2	C	L	
A_3	C	C	L

One bundle crossing X_3: the n-cable of a crossing, for $n = 3$. Each strand A_i crosses each B_j once, B on top every time; under each crossing, its pair (i, j). In the grid, C marks the pairs crossed before the middle layer L ($j < i$). Step 2 of the note changes the pairs with $j > i$ (circled, shaded), the second half of the word, so that it becomes $C\,L\,C^{-1}$.
